

## Dual Shafted "Light Tension" Take Up

Material is driven onto the spool with our patent pending technology, preventing the profile from crushing. Our proprietary guides maintain material orientation for the best spool profile in the industry.

*Designed to solve "light tension" profile winding challenges*

Our DSTU can wind flexible products with near zero tension!

- Drives product onto reel
- No stretch
- Eliminates distortion
- Constant tension throughout

## Dual Shafted "Light Tension" Take Up

Standard specifications include:

- Dual headed winding
- Digital servo motors
- Integrated winding mathematics
- Simple recipes
- Easy downloading
- Complete material recipes
- Reel recipes as required
- Adjustable dwell & boost
- Material length accuracy
- Data logging
- Configuration data maintained in PC

*Extensive diagnostics make troubleshooting and failure predictions simpler*

Precision winding patterns, reinforced by digital servo motors, ensure a meticulous laydown for exacting performance.

Our two take-up reels are completely independent and can handle individual projects without interference with each other.
