

SPIRAL STRIPING EQUIPMENT

WST-200 Series

WST-200 Series as configured for PTFE wire insulation with optional preheater and second stage oven as shown.

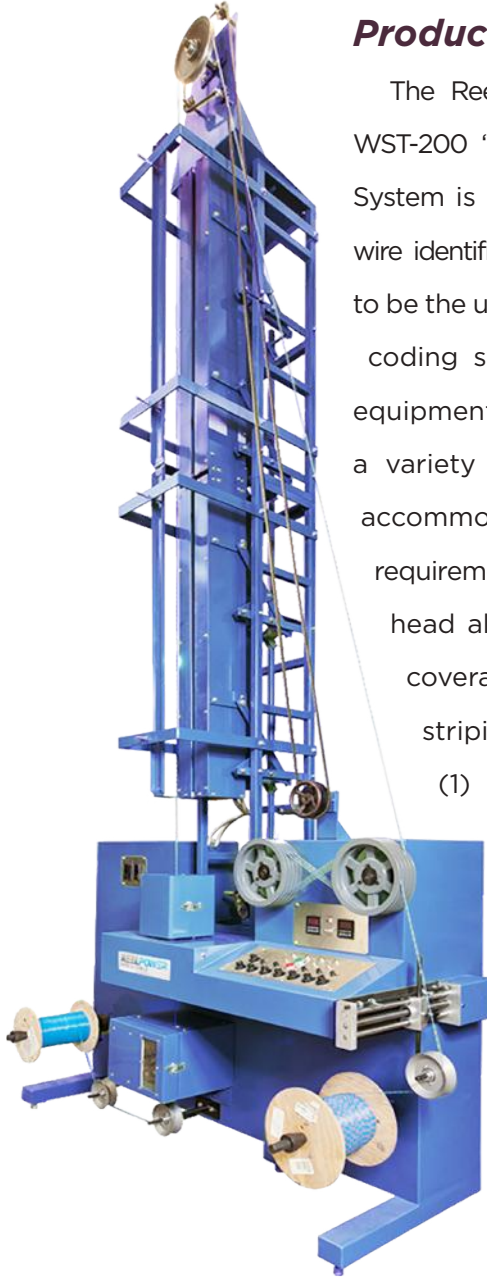

WST-200 Series

Spiral Striping System is a practical approach to your wire identification requirements. Engineered to be the ultimate in high production wire coding systems, the WST-200 series equipment can be configured with a variety of auxiliary attachments to accommodate today's wire coding requirements.

SPIRAL STRIPING EQUIPMENT

WST-200 Series

Product Description:

The ReelPower Wire & Cable Model WST-200 "Code-O-Color" Spiral Striping System is a practical approach to your wire identification requirements. Engineered to be the ultimate in high production wire coding systems, the WST-200 series equipment can be configured with a variety of auxiliary attachments to accommodate today's wire coding requirements. The unique spiral striping head allow for 100% helical striping coverage with three (3) individual striping wheels. System can apply (1) one to (3) three stripes in up to (3) three colors to the wire simultaneously with adjustable striping wheel angles. Single, dual and triple sintering ovens are available for the WST Series allowing the system to process a variety of conductor jackets. Precise temperature

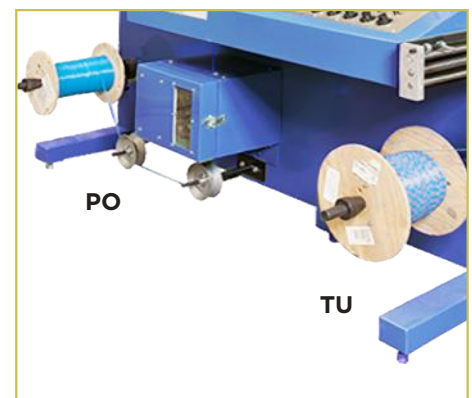

of ovens is accomplished via SCR temperature controls for each oven assembly.
