Take-ups / Payoffs
Traversing Reel Take-ups and Payoffs are some of the most advanced on the market today. The units traverse the entire reel in front of the material line, creating an optimum layer wound package. The overhead beam and traversing reel design minimizes line lengths requirements. Main drive systems are engineered to customers' specifications and equipped with an operator color touchscreen interface. Traversing frame, pintle arm and cantilevered shaft style units are also available.

TRTU-36 Overhead Beam
Equipment Benefits:
• Overhead Beam Design
• Roll Thru Capabilities
• Zero Material Fleeting Angle
• Increased Productivity
• Superior Levelwind Capabilities
• Processes Round, Flat and Rectangular Product
• Minimal Line Lengths

• Modular Constructed
• Units Available in Banks of 2, 4, 6, or 8 Positions
• PLC Controlled
• Color Touchscreen
• Servo Traverse Drive
• Processes Round, Flat and Rectangular Products
• Independent Load Controls

Model TFTU-48 Pintle Arm Style
